SUMMARY

We founded Saiba with the goal of helping you find a safe foothold in the world of NFTs. This is why we are creating a blockchain-based social platform where only individually reviewed groups can grow their communities for NFT projects.

Through building a strong community and launching NFT projects of our own, we ensure a solid foundation from which our platform will take off.

WHY NOW?

We have all seen the sharp rise in NFT-related scams in recent months. Beyond the obvious financial damages, this notorious unreliability has also greatly undermined the trust of buyers and potential investors. We have been keeping an eye on these “rug pulls” and “slow rugs”, and even some of our own team have fallen victim to a few of them.

We came to the conclusion that if nobody else is stepping up to do something about the problem, then we will.

Although there are several kinds of scams to watch out for on the NFT market, perhaps the two most common are the so-called rug pull and slow rug scams. A rug pull is a banal scam in which the creator of an NFT simply leaves the project shortly after minting. Their promises are not kept and their community is abandoned, which inevitably leads to the value of the NFT plummeting.

As the name implies, a slow rug or slow rug pull scam is a protracted version of the rug pull: the creators of the project slowly, gradually begin missing or pushing deadlines, withdraw from their social media, and finally become entirely uncontactable. This process is generally accompanied by a similarly gradual decline in the NFT's value.

In short, an NFT project begins losing value when its creators abandon it. This may be the result of a premeditated scam, or simply a case of the creators promising more than they can deliver. Unforeseen changes in the market or the creators' personal lives can also cause a domino effect, finally ending with the decision to let the project go rather than keep it running.

SAIBA PLATFORM

Why trust Saiba?

The best solution to the worldwide NFT market's current total lack of governmental regulation is a grassroots movement created by and for the market's participants.

In light of current market conditions, Launchpad (MonkeLabs) or Marketplace platforms (eg. OpenSea, Magic Eden) tend to be more profit-oriented, and as such they do not adequately (or at all) filter or review NFT projects, instead leaving all responsibility to the users/investors.

The chaotic nature of the market is further amplified by NFT creators using platforms for their projects that were not designed for it, such as Discord.

Discord was created in 2015 to provide a social platform to gamers where they are free to create their own spaces based on their personal interests.

Today, about 80% of Discord's user base identify as gamers, and there is a general atmosphere of discontent toward the NFT market. NFT creators originally picked Discord for its convenient functions. So far, however, the platform itself seems to be largely ignoring its burgeoning NFT scene, and they are taking no steps towards making it a safer platform for these purposes.

Looking at NFTs from the perspective of long-term investment, the current situation seems entirely untenable.

In the future, we envision the Nft market's community will be built around the Saiba Platform, just like it is now on Discord.

The Saiba Platform will have similar features to the Discord currently in use, complete with features related to the NFT world.

With this in mind, we can also consider Discord a kind of competitor, but they are not taking a meaningful step towards the NFT community in any way, and from here we are not talking about competition.

How Saiba solves the problem?

We are developing a hybrid web application that stores data partially on the blockchain.

Before allowing a project to begin building a community on our platform, it will be screened personally by our team, as well as specialized algorithms to ensure legitimacy and reliability. We offer a way to keep a constant watch on each individual project's roadmap and to take legal steps in case of a breach of contract.

The smooth operation of our platform will be backed by a legally rigorous terms of service, which provides a safe space to potential buyers and investors. Any breach of these terms opens an avenue for legal recourse. This will be overseen by a robust legal team in the future.

This means that if a scam should occur on our platform, we will have a way to take immediate legal action.

In certain cases, it may be possible that a scammer disappears in a particularly difficult way, such as “escaping” to a country where it may be difficult to pursue them by legal means.

Therefore, exercising personal responsibility by the buyers remains important, as in such cases we cannot guarantee the effectiveness of our legal methods, only that the given person or persons will not be allowed to start another project on our platform.

As defining what exactly constitutes a scam may sometimes be difficult, we will approach this question from a legal perspective as well.

By entering the market with an NFT project through which we can showcase the operation and principles of the Saiba Platform, we are able to gain familiarity, which in itself holds marketing potential in the NFT space. Naturally we have other marketing strategies, which we will be employing on social media platforms that target NFT users and project creators.

Given the market's size and potential for growth, with several NFT projects kicking off every week, the long-term scalability of the Saiba Platform is assured.

WHY SOLANA?

The Solana blockchain is quick, relatively reliable, and considered cheap in regards to gas fees. Its popularity has surged in the past half year, during which time countless creative teams have migrated from ethereum to the Solana chain. It is for exactly these reasons that scamming has become widespread. We believe preventing scams on Solana should be the highest priority. Involving projects on ethereum, cardano, and other emerging chains in the Saiba Platform is part of our long-term plan.

ROADMAP

Our target demographic are the investors who share our long-term vision: we speak to those who have personally experienced being scammed in the NFT world and therefore see the importance of properly screening new projects.

Phase 1: Enter Saiba NFT collection

Enter Saiba is a 777 limited edition NFT collection which offers strong investment opportunities in the short, medium, and long term.

We are targeting a tight demographic on which to build the later parts of the project. As our earliest investors are the most important, we screen them thoroughly before allowing participation in the pre-sale, since they will have the greatest share of the platform.

Owners will receive:

ROYALTY DISTRIBUTION

77% of royalties will be distributed among the owners of Enter Saiba every month.

FREE NFT IN PHASE 2 (10K)

As long as they do NOT list their NFTs on the marketplace on the date we have set, Enter Saiba buyers will be entitled to one free NFT per wallet from the Phase 2 collection.

INSTANT WHITELIST IN PHASE 2 (10K)

As long as they do NOT list their NFTs on the marketplace on the date we have set, Enter Saiba buyers will be entitled to a free WL slot per wallet in the Phase 2 collection.

STAKE

We offer an opportunity to stake to owners after the closing of Phase 2.

Phase 1: Enter Saiba Income Allocation

100% of proceeds are used for the benefit of the Saiba Agents collection, which includes marketing, art, and other developments.

In the beginning, we will be using all income from royalties on Phase 2.

Phase 2: Saiba Agents NFT collection

Saiba Agents is an NFT collection of 10k.

All proceeds from the first collection will be used for the creation and marketing of the second collection. After the successful minting of Enter Saiba, we will cast a wider net for prospective investors, emphasizing the importance of the creation of our platform.

Owners will receive:

ROYALTY DISTRIBUTION

25% of royalties will be distributed among the owners of Saiba Agents every month.

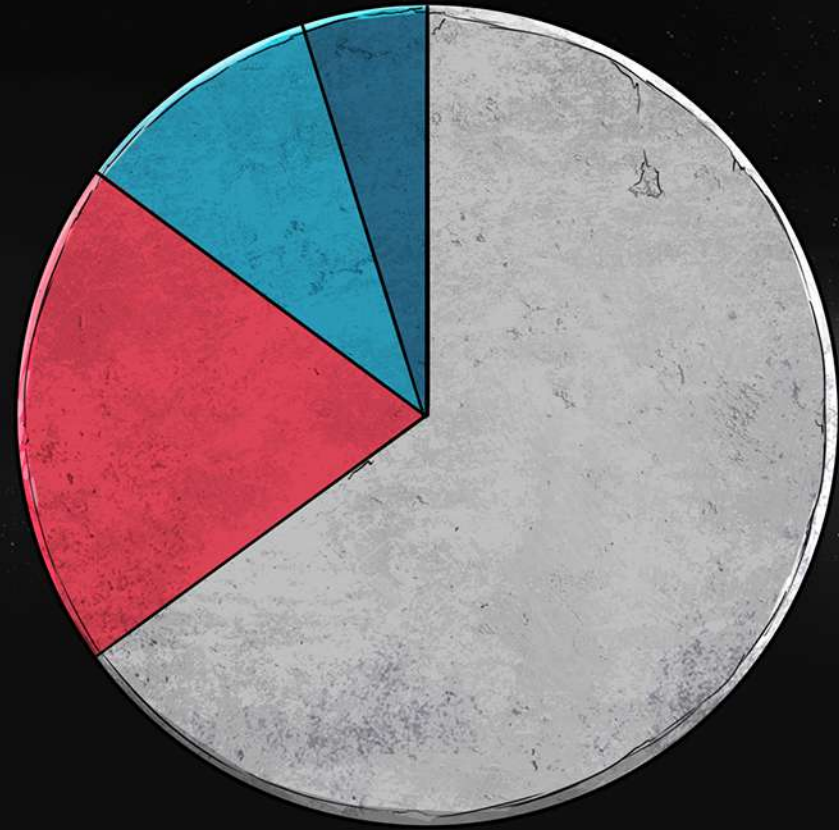

STAKE

Staking opportunities will be offered to everyone, relative to the rarity of the NFTs.

Phase 2: Saiba Agents Income Allocation

- Saiba Platform (65%)
- Team (20%)
- Token Liquidity (10%)
- DAO (5%)

Phase 3: Saiba Accessories collection

Saiba Accessories is an NFT collection of 10k composed for 3 separate, assemblable parts with different staking opportunities.

Owners will receive:

STAKE

Saiba Accessories offers further staking opportunities to its holders, which provides access to the pSAIBA token, as well as the SAIBA token which can be used for the platform.

ROYALTY DISTRIBUTION

30% of royalties will be distributed among the owners of Fully Assembled Accessories every month.

STAKING

Pre-Phase (Phase 1, 2): pre-Saiba token (pSAIBA)

Until the closing of Phase 3, by staking Enter Saiba (Phase 1) and Saiba Agents (Phase 2) NFTs, owners will receive pre-Saiba (pSAIBA) tokens, which they will be able to exchange for Saiba Accessories collection NFTs (Phase 3).

After the closing of Phase 3, a new staking opportunity will open to owners, in which all NFTs (Phase 1, 2, 3) will be open to staking for Saiba tokens (SAIBA), which is the native token of the Saiba platform.

MARKETING

We will do all we can to involve the investors with the most potential in our community.

1. Paid promotions (on YouTube, Twitter, Discord)
2. Organic development, personal presence in NFT communities
3. Collaboration with different projects, especially those who share our vision
4. Giveaways
5. Twitter Space conversations, AMAs, direct communication with potentials

MILESTONES

February 13: 1500 followers on Twitter

February 15: 800 members on Discord

February 18: 2500 followers on Twitter

February 22: 1600 members on Discord

February 25: 3000 followers on Twitter

TEAM

I have 4 years of experience in digital marketing and have been actively involved in the crypto scene for 2 years. The idea for Saiba started with me, and I believe I have a good perspective of the NFT market, having quickly learned my way around the scene using an analytical approach.

I am responsible for the organization of the community, optimizing marketing strategies, and for keeping the team running smoothly.

Ádám Póti CEO,
Idea man

TEAM

Development is my passion. First and foremost I work in application and game development, although I am closely involved with UI/UX design as well. I like to accompany a product from inception to success.

I work as a project manager on multiple projects, where I believe I'm able to draw out the best from people. I have been actively working with crypto for about a year, primarily as an investor, but lately also on the technological side as well. I will be responsible for the creation and visual presentation of the platform.

Máté Pataki CTO,

TEAM

I have been a huge fan of IT since my childhood. I got into the world of cryptocurrencies about three years ago, and I've been trading crypto and Solana NFTs ever since.

I see myself as a general advisors to the team; I wear many hats, among them marketing, designing NFTs, and the finetuning of the platform's technical development.

dr. Márk Kovács
CCO,

TEAM

I am 27 years old, in the last year of my medical degree. I have been part of the crypto world for over two years now and have been part of several NFT projects as a buyer/investor.

Most of my experience comes from ETH and Solana NFT projects. I'm a massive fan of the Solana and Cardano NFT markets.

My inspiration for Saiba comes from my most successful NFT investments. I am responsible for the project's inside strategies.

Martin Póti CSO,
Head Of Strategy

TEAM

I'm currently living in a small village by Budapest in the company of dogs, rabbits, ducks, guinea pigs, and my family, close to nature. I have been involved with video game development for about fifteen years, and for about two years with comic books as a freelancer.

Cryptocurrencies and NFTs piqued my interest about a year ago. These days I've mostly been working on NFT projects and my first independent video game.
